CASE STUDY 1 – TRAVEL AGENCY WEBSITE

Develop a travel portal presenting holiday packages, popular destinations, trip durations, prices, itineraries, and travel inquiry forms. Use destination cards, hero images, and responsive layouts.

1. Explanation

The aim of this project is to develop a Travel Agency Website using HTML and CSS.

The website is designed to provide information about different holiday packages, popular tourist destinations, trip durations, prices, itineraries, and travel inquiry forms.

HTML is used to create the structure of the website, and CSS is used to design the webpage with attractive colors, destination cards, background images, and responsive layouts.

2. HTML tags used with purpose

HTML tag	Purpose
<!DOCTYPE html>	Declares the document as HTML5.
<html>	Defines the root of the webpage.
<head>	Contains webpage information.
<title>	Sets the browser tab title.
<meta>	Provides webpage information and settings.
<style>	Contains CSS styling.
<body>	Contains visible webpage content.
<header>	Creates the top section of the website.
<nav>	Creates navigation menus.
<a>	Creates hyperlinks.
	Groups HTML elements.
<section>	Divides the webpage into sections.

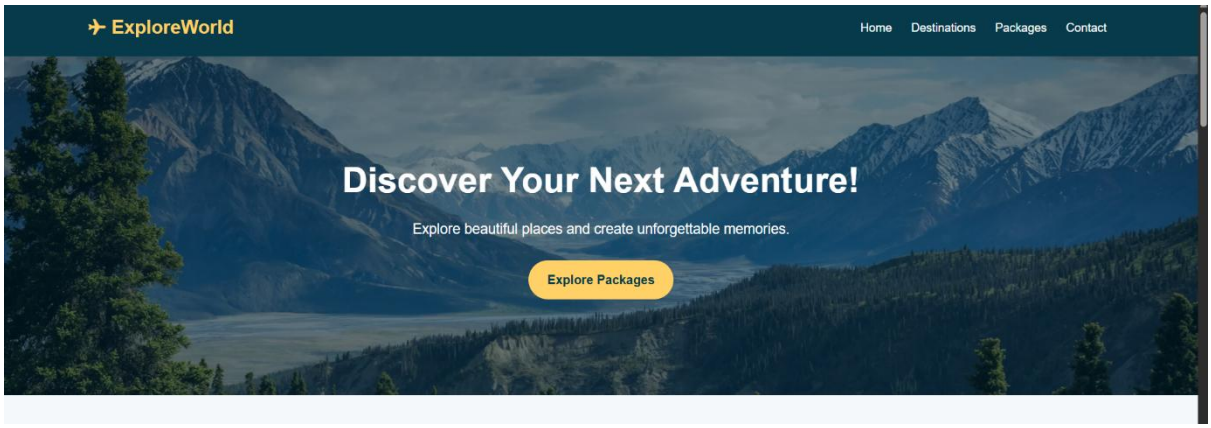

<h1>	Defines the main heading.
<h2>	Defines section headings.
<h3>	Defines smaller headings.
<p>	Displays paragraph text.
<img>	Displays destination images.
<form>	Creates a travel inquiry form.
<label>	Provides names for form fields.
<input>	Accepts user information.
<select>	Creates a dropdown menu.
<option>	Defines dropdown choices.
<textarea>	Accepts longer messages.
<button>	Creates clickable buttons.
<footer>	Creates the bottom section of the webpage.
	Highlights important text in bold.

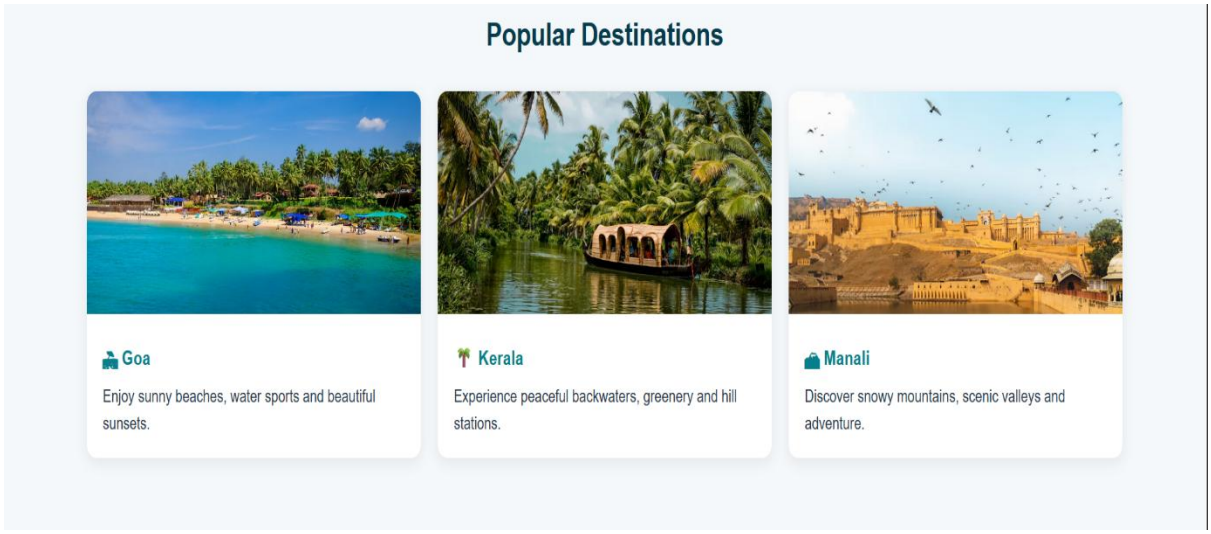

3. CSS properties used with purpose

CSS property	Purpose
margin	Adds outside spacing.
padding	Adds inside spacing.
color	Changes text color.
background-color	Sets background color.
background-image	Adds background images.
background-size	Controls background image size.
background-position	Positions the background image.
font-family	Changes font style.
font-size	Changes text size.
font-weight	Makes text bold or normal.
text-align	Aligns text.
display	Defines element layout.
flex	Controls flexible layout sizing.

flex-wrap	Moves items to the next line.
justify-content	Aligns items horizontally along the main axis.
align-items	Aligns items along the cross axis.
grid-template-columns	Creates grid columns.
gap	Adds space between cards.
width	Sets element width.
height	Sets element height.
border	Adds borders.
border-radius	Creates rounded corners.
box-shadow	Adds shadow effects.
transition	Creates smooth effects.
transform	Changes element position or size.
object-fit	Adjusts images inside containers.
cursor	Changes the mouse pointer.

CASE STUDY 2 – HOTEL RESERVATION WEBSITE

Design a hotel website containing room categories, room images, facilities, tariffs, check-in and check-out fields, and reservation forms. Create attractive room cards and responsive booking sections.

1. Explanation

The aim of this project is to design a Hotel Reservation Website using HTML and CSS. It provides information about hotel rooms, facilities, prices, and booking details.

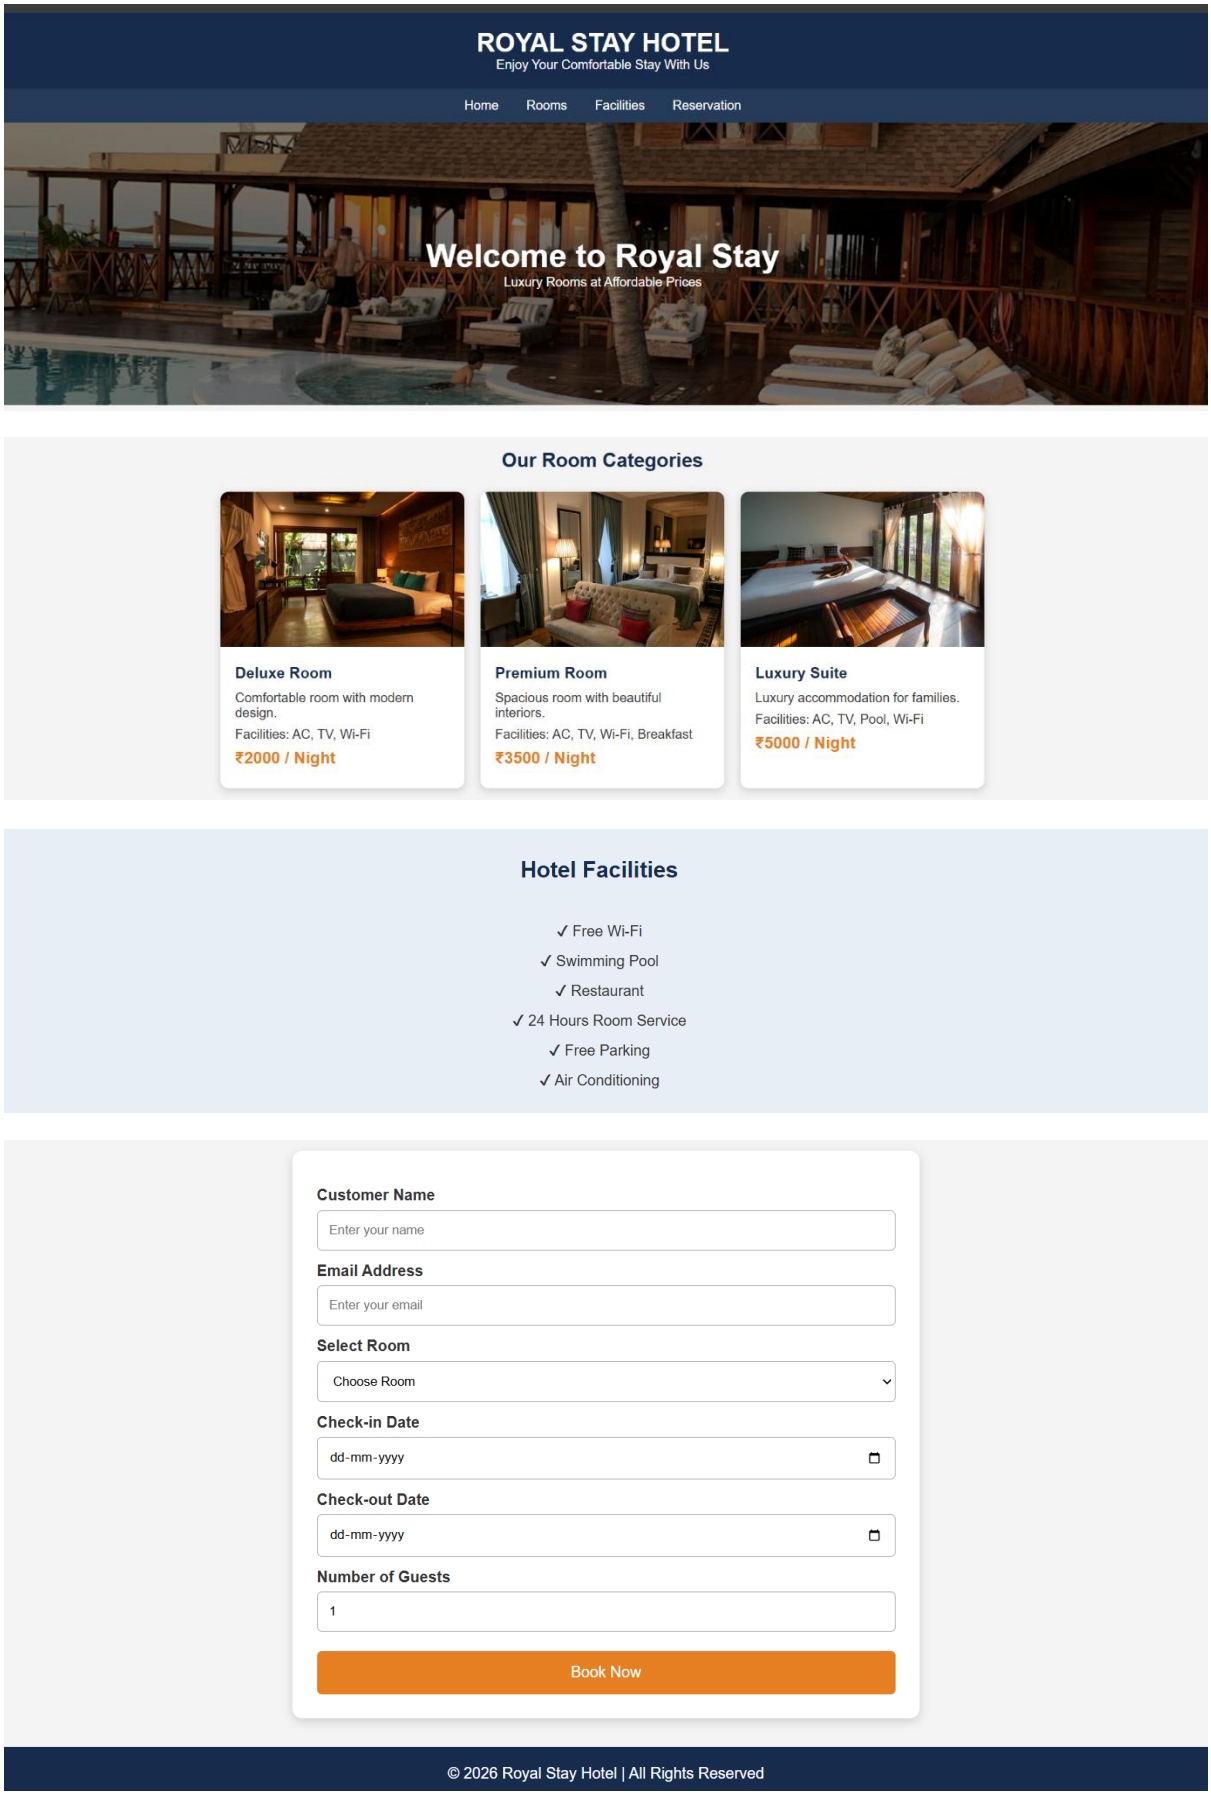

2. HTML Tags Used and Their Purpose

HTML Tag	Purpose
<!DOCTYPE html>	Defines the HTML5 document.
<html>	Root element of the webpage.
<head>	Contains page information and CSS links.
<title>	Displays the webpage title in the browser tab.
<body>	Contains all visible webpage content.
<header>	Creates the top section of the website.
<nav>	Creates navigation links.
<a>	Creates hyperlinks.
<section>	Divides the webpage into sections.
	Groups related HTML elements.
<h1> to <h3>	Displays headings.
<p>	Displays paragraphs and descriptions.
<img>	Displays room and hotel images.
<form>	Creates the reservation form.
<label>	Provides names for form fields.
<input>	Accepts user details and dates.
<select>	Creates a dropdown for room categories.
<option>	Provides dropdown choices.
<button>	Creates a booking or submit button.
<footer>	Displays contact and copyright information.

3. CSS Properties Used and Their Purpose

CSS Property	Purpose
color	Changes the text color.
background-color	Sets the background color.
font-family	Changes the font style.
font-size	Controls the text size.
font-weight	Makes text bold or normal.
text-align	Aligns text left, right, or center.
margin	Adds space outside an element.
padding	Adds space inside an element.
width	Sets the element width.
height	Sets the element height.
display	Controls how elements are displayed.
flex	Helps arrange elements in a flexible layout.
grid-template-columns	Defines columns in a grid layout.
gap	Adds space between elements.
border	Adds a border around elements.
border-radius	Makes corners rounded.
box-shadow	Adds shadow effects to room cards.
object-fit	Controls how images fit inside their containers.
cursor	Changes the mouse pointer style.
transition	Creates smooth visual effects.
@media	Makes the website responsive on different screen sizes.

CASE STUDY 3 -HOSPITAL AND HEALTH CARE SERVICES

Create a hospital website presenting departments, doctors, specialties, facilities, visiting hours, emergency contact details, and appointment request forms. Use accessible forms and responsive layouts.

2. HTML Tags Used and Their Purpose

HTML Tag	Purpose
<!DOCTYPE html>	Defines the HTML5 document.
<html>	Root element of the webpage.
<head>	Contains webpage information and CSS links.
<title>	Displays the webpage title in the browser tab.
<body>	Contains all visible webpage content.
<header>	Creates the top section of the website.
<nav>	Creates navigation menus.
<a>	Creates hyperlinks.
<section>	Divides the webpage into different sections.
	Groups related HTML elements.
<h1> to <h3>	Displays headings and subheadings.
<p>	Displays text and descriptions.
<img>	Displays doctor and hospital images.
	Creates an unordered list.
	Defines list items.
<form>	Creates the appointment request form.
<label>	Provides names for form fields.
<input>	Accepts patient details and appointment dates.
<select>	Creates a dropdown list for departments.
<option>	Provides choices in a dropdown list.
<textarea>	Allows patients to enter additional messages.
<button>	Creates a submit or appointment button.
<footer>	Displays contact details and copyright information.

3. CSS Properties Used and Their Purpose

CSS Property	Purpose
color	Changes the text color.
background-color	Sets the background color.
font-family	Changes the font style.
font-size	Controls the text size.
font-weight	Makes text bold or normal.
text-align	Aligns text left, right, or center.
margin	Adds space outside an element.
padding	Adds space inside an element.
width	Sets the element width.
height	Sets the element height.
display	Controls how elements are displayed.
flex	Arranges elements in a flexible layout.
grid-template-columns	Defines columns in a grid layout.
gap	Adds space between elements.
border	Adds a border around elements.
border-radius	Makes element corners rounded.
box-shadow	Adds shadow effects to cards.
object-fit	Controls how images fit inside containers.
cursor	Changes the mouse pointer style.
transition	Creates smooth visual effects.
@media	Makes the website responsive to different screen sizes.
